

ProposallQ

AI Proposal & Pricing Intelligence | B2B SaaS | India / South Asia

Extracted from Startup Validation Report • Target: 15M+ Indian Freelancers

Stage: Pre-Seed | Validation: User Interviews | Verdict: GO (78/100)

01 — EXECUTIVE SUMMARY

ProposallQ addresses a costly, daily pain for India's 15M+ freelancers: the hours lost writing proposals that don't win, the revenue leaked through underpricing, and the projects derailed by scope creep. No existing tool combines portfolio-aware proposal generation, predictive market-rate pricing, and pre-contract risk detection. The MVP must prove one core truth: **users win more projects, faster, with ProposallQ than without it.**

02 — IDEAL CUSTOMER PROFILE (ICP)

Dimension	Primary ICP	Secondary ICP
Who	Tech freelancer (developer / designer)	Independent consultant or agency owner
Location	Bangalore, Hyderabad, Pune, Mumbai, Delhi NCR	Philippines, Pakistan, Bangladesh (Yr 2)
Experience	2–8 years freelancing	1–3 year solopreneur / boutique agency
Platforms Used	Upwork, Toptal, LinkedIn, direct clients	Fiverr Pro, Freelancer.com, Contra
Annual Revenue	Rs.5L – Rs.30L freelance income	Rs.2L – Rs.15L/year
Tech Savviness	Already uses SaaS: Notion, Slack, Calendly	Some tools; cost-conscious
Pain Trigger	Losing bids despite strong portfolio	Undercharging; scope creep
WTP	Rs.999–Rs.1,999/mo for 10%+ win rate lift	Rs.499/mo freemium
Decision Speed	Fast — sole decision-maker	Medium — sole decision-maker
Key Channels	LinkedIn, Twitter/X, YouTube, Reddit	WhatsApp / Telegram communities

03 — BUYER PERSONAS

Arjun Sharma

Full-Stack

"I spend more time writing proposals than coding. I have no idea if I'm charging too little."

Goals

- Win more projects on Upwork
- Stop undercharging
- Reduce unbillable sales hours

Pain Points

- Loses bids to cheaper competitors
- 10+ hrs/wk on proposals
- Scope creep every 2nd project

Buying Triggers

- Lost a big bid
- Saw ProposalIQ in dev community
- Free trial with no card needed

Priya Menon

UX/UI Des

"I don't know if my proposals sound professional enough to compete with agencies."

Goals

- Raise rate from Rs.1,500 to Rs.3,000/hr
- Build retainer client base
- Look like an agency

Pain Points

- Generic proposals despite strong portfolio
- Pricing questioned every time
- Can't pre-qualify projects

Buying Triggers

- Frustrated after losing agency pitch
- Found ProposalIQ in designer Slack
- 14-day free trial

04 — TOP 10 CUSTOMER PAIN POINTS

#	Pain Point	Frequency	Severity	Revenue Impact
1	Writing tailored proposals from scratch	Daily	CRITICAL	10–20 hrs/wk unbillable
2	Not knowing the right price to charge	Per project	CRITICAL	20–40% revenue leakage
3	Scope creep discovered only post-contract	Often	CRITICAL	15–30% project overrun
4	Generic proposals that don't showcase portfolio	Always	HIGH	Win rate below 20%
5	Portfolio not automatically referenced in bids	Always	HIGH	Hours lost manually cross-referencing
6	Inability to detect red-flag clients upfront	Frequent	HIGH	1–2 nightmare projects/yr
7	Platform fees eroding already-thin margins	Monthly	MEDIUM	10–20% revenue lost
8	Imposter syndrome when quoting senior rates	Common	MEDIUM	Prevents rate growth
9	No structured feedback on why proposals lose	Ongoing	MEDIUM	Stagnant win rate
10	Fragmented workflow: write → price → send	Daily	MEDIUM	Wasted context switching

05 — CUSTOMER JOURNEY

AWARENESS	CONSIDER	TRY	PURCHASE	RETAIN
Actions	Actions	Actions	Actions	Actions
• Loses a project bid • Spends 3 hrs on a proposal • Hears about ProposalIQ in community	• Visits landing page • Watches 90-sec demo • Compares vs ChatGPT	• Signs up free tier • Connects portfolio • Generates first proposal	• Submits winning proposal • Upgrades to paid plan • Charges 20% more	• Refers 2–3 freelancer friends • Posts win story on LinkedIn • Joins ambassador program
Touchpoints	Touchpoints	Touchpoints	Touchpoints	Touchpoints
• LinkedIn / Twitter/X • Freelancer forums • Word of mouth / peer referral	• Website SEO • Product Hunt listing • G2 / Capterra reviews	• Onboarding email flow • In-app tutorial • First-win celebration UX	• Upgrade prompt after win • ROI calculation email • Annual plan discount	• Referral reward program • Community Slack / Discord • Testimonial request

06 — KEY OBJECTIONS & BUYING TRIGGERS

Objection	Counter-Move	Buying Trigger	Moment of Action
"Is this just another template tool?"	Live demo: brief analysis + pricing engine — not text generation	Lost a significant project bid	Emotional — acts within 24 hrs
"I can use ChatGPT for free"	Portfolio integration + market-rate data = unique value ChatGPT can't provide	Just raised their freelance rate	Wants to defend & win at new rate
"I can't afford Rs.999/month"	1 extra project/mo at Rs.5K pays for 5 years. Free tier removes risk.	New to Upwork or Toptal	Needs a competitive edge immediately
"Will proposals sound robotic?"	Show voice controls + personalisation sliders in onboarding	Hit a 12-18 month income plateau	Actively looking for growth levers
"Does it know international client rates?"	Multi-market data is roadmap Q2; early adopters shape it	Saw AI tools in community post	FOMO drives free trial signup
"I need to try before I buy"	14-day full-feature trial, no card required	Referred by a freelancer peer	High trust — converts at 3x rate

07 — MVP RECOMMENDATION

Core Question the MVP Must Answer:

Can ProposalIQ increase a freelancer's proposal win rate by at least 15% within the first 30 days?

BUILD FIRST — The Winning Core	DO NOT BUILD YET — Scope Killers
1. Brief Intake Engine — paste/upload a client brief and get instant analysis 2. Portfolio Connector — link top 5 past projects (manual input v1) 3. Proposal Generator — Claude API produces tailored proposal in <30 seconds 4. Pricing Recommender — suggest rate range based on project type + India benchmarks 5. Risk Flags Panel — 3–5 auto-detected red flags from brief analysis 6. One-Click Export — copy to clipboard or download as .docx 7. Basic Analytics — proposals sent, win/loss tracking (self-reported)	✗ Native Upwork/Fiverr API integration (complex, policy risk) ✗ CRM or client management features (scope creep) ✗ Invoice generation or payment processing ✗ Team/agency collaboration features ✗ Mobile app (web-first, mobile-responsive instead) ✗ Automated email sending ✗ Custom AI model training (use Claude/GPT API first)

MVP Success Metrics (30/60/90 Days)

Metric	Day 30 Target	Day 60 Target	Day 90 Target
Waitlist / Signups	500+	1,000+	2,500+

Active Free Users	50+	200+	500+
Paying Subscribers	10+	50+	150+
MRR	Rs.5K+	Rs.35K+	Rs.1.2L+
Avg. Proposals Generated/User/Wk	3+	4+	5+
Self-Reported Win Rate Lift	>10%	>15%	>20%
NPS Score	40+	50+	55+
Churn Rate (Monthly)	<15%	<10%	<8%

08 — MoSCoW PRIORITIZATION

MUST HAVE	Brief analysis engine (paste brief → instant AI analysis) • AI proposal generator (portfolio-aware, <30 sec) • India-benchmarked pricing recommender • Pre-contract risk flag detection (3–5 flags) • Portfolio input (manual: 3–5 project descriptions) • One-click .docx / clipboard export • User account + proposal history • Free tier + paid plan gating
SHOULD HAVE	Win/loss self-reporting + analytics dashboard • Proposal templates library (10 categories) • Email capture + onboarding drip sequence • Referral program mechanism • Pricing confidence score with market percentile • In-app feedback and proposal rating
COULD HAVE	Chrome extension for Upwork brief capture • PDF / Notion portfolio import • Client red-flag database (crowdsourced) • Proposal version comparison • Multi-language support (Hindi, Tamil)
WON'T HAVE (v1)	Native platform API integration (Upwork/Fiverr) • Payment / invoice processing • Team / agency seat management • Mobile native app (iOS/Android) • Custom AI model fine-tuning • CRM or pipeline management

09 — PRICING HYPOTHESIS

Tier	Price	Target User	Key Limits	Monetisation Logic
Free	Rs.0/mo	Lurkers & trial	5 proposals/mo, watermark on export	Top-of-funnel; drives referrals
Starter	Rs.499/mo	Part-time / new freelancers	25 proposals/mo, basic pricing data	Converts free users; low friction
Pro	Rs.999/mo	Full-time tech freelancers	Unlimited proposals, full analytics	Primary revenue tier; best value
Agency	Rs.1,999/mo	Agencies & power users	3 seats, white-label export, API access	Upsell path; highest LTV
Annual	–20% discount	All paid tiers	Paid upfront	Reduces churn; improves CAC payback

Pricing Rationale: ROI framing is the key conversion lever. At Rs.999/mo, if ProposalIQ helps win just one additional Rs.10K project per month, the tool pays for itself 10x over. India-first pricing (vs. \$35–\$49/mo Western competitors) removes the #1 objection immediately. Anchor on the Pro tier; position Free as a generous trial, not a permanent home.

10 — TOP 5 RISKS & MITIGATIONS

#	Risk	Likelihood	Impact	Mitigation
1	Upwork/Fiverr build native AI proposal tools	Medium	HIGH	Build off-platform moat: direct clients, cross-platform users, agency tier
2	Freelancers use ChatGPT instead of paying	High	MEDIUM	Demo unique value: portfolio integration + India pricing data = impossible to replicate with ChatGPT alone
3	Pricing data becomes stale / inaccurate	Medium	MEDIUM	Crowdsource benchmark data from users; integrate Payoneer/Glassdoor feeds quarterly
4	Slow adoption due to habit inertia	High	MEDIUM	Generous free tier + community-led growth + visible quick wins in first 5 minutes
5	Founders underestimate AI infrastructure cost	Medium	MEDIUM	Set usage caps on free tier; track API cost per proposal; price above breakeven from Day 1

11 — 30-DAY MVP PLAN

WEEK 1 Days 1–7 Validate & Frame

- Conduct 5 more user interviews (record, transcribe, code themes)
- Build landing page (Framer/Webflow) with email waitlist + explainer video
- Create 'manual MVP': write 3 proposals using structured template — test win rate
- Define pricing tiers; set up Stripe in test mode
- Post problem statement in 3 freelancer communities; track engagement
- GOAL: 100 waitlist signups + 1 confirmed design partner

WEEK 2 Days 8–14 Build Core MVP

- Integrate Claude/GPT API for brief → proposal generation
- Build portfolio input form (text-based, 3–5 projects)
- Add India pricing benchmark layer (manual data table first, API later)
- Build risk flag detection with 5 prompt-engineered heuristics
- Set up PostHog / Mixpanel analytics from Day 1
- GOAL: Working prototype shared with 5 design partners for real project use

WEEK 3
Days 15–21

Launch & Distribute

- Launch on Product Hunt (Tuesday 12:01AM PST — maximises visibility)
- Publish LinkedIn content series: '5 mistakes freelancers make in proposals'
- Launch referral: 'Invite 3 friends → get 3 months free'
- Join 10 WhatsApp/Telegram/Discord freelancer communities; add value daily
- DM 5 Indian freelancer YouTubers for collab / review
- GOAL: 500 waitlist signups + Product Hunt Top 10 of the Day

WEEK 4
Days 22–30

Monetise & Iterate

- Convert 10 waitlist users to paid beta @ Rs.299/mo early-bird
- Collect 3 written testimonials with concrete win-rate data
- Calculate unit economics: CAC, ARPU, churn, LTV
- Prepare 10-slide investor deck using Validation Report as foundation
- Apply to Antler India, Y Combinator, or Surge (Peak XV) accelerator
- GOAL: Rs.3,000+ MRR + accelerator application submitted

12 — FOUNDER ACTION SHEET — TOP 10 NEXT ACTIONS

#	Action	Owner	Due	Output
1	Conduct 5 structured user interviews (JTBD framework)	You	Day 3	Validated pain + feature priorities
2	Build waitlist landing page with explainer video	You	Day 4	Email capture + social proof
3	Run 'manual MVP': write 3 proposals for real briefs	You	Day 5	Win rate baseline + process clarity
4	Set up Claude API integration for brief → proposal	Tech	Day 10	Working prototype v0.1
5	Source India freelancer rate data (Payoneer/surveys)	You	Day 10	Pricing benchmark table
6	Identify 5 design partner users for weekly feedback	You	Day 12	Dedicated beta testers
7	Launch on Product Hunt	You	Day 17	500+ signups + visibility
8	Publish 3 LinkedIn posts on freelancer proposal pain	You	Day 20	Organic traffic + community trust
9	Convert 10 users to Rs.299/mo paid beta	You	Day 28	First MRR + validation proof
10	Submit to Antler India / Y Combinator / Surge	You	Day 30	Accelerator pipeline open

13 — SCORES (0–100)

Customer Clarity — Strong ICP; two well-defined personas with clear channels

Problem Severity — Daily, costly, and emotionally charged — near-perfect problem

PMF Potential — Clear gap + right timing; PMF achievable with strong execution

MVP Readiness — Buildable in 2–4 weeks; pricing data sourcing is the main gap
